

Cushion Tire Forklift Attachment

Cushion Tire Forklift Attachment - Cushion tires are a solid tire with a smooth profile. Its' tread is bonded to a steel ring so as to shape the tire, and the tire is pressed onto a hub that is affixed to the lift truck. These types of tires are ideal to utilize in smooth floor warehouses and are obtainable in several rubber or polyurethane compounds.

Consisting of polyurethane, a poly tire is a very solid tire. These types of tires are utilized as a replacement for cushion tires when there is a higher load capacity than can be obtained making use of a cushion tire and those applications that require a lower steering effort. Poly tires accessible in several hardness ratings so as to meet various individual application requirements. Orderpicker lift trucks and Narrow Aisle models will typically use small diameter poly tires for their outrigger load wheels.
