

Barrel Clamps

Barrel Clamps - Referred to as "Barrel Clamp", this particular hydraulic attachment is used on forklifts to compress objects that you want to transport utilizing the lift truck. Typically, they are utilized to barrels, handle kegs, and paper rolls, along with several barrel clamp designs being able to revolve the cargo. For example, the rotate function enables a lift truck operator to be able to slot in a vertically stored paper into the horizontal intake of a printing press.
