

Aerial Work Platform

Aerial Work Platforms - There are numerous accessories used for lift trucks that could be utilized to help expand the functionality of your lift truck and allow you to carry items, handle materials with greater ease or to accomplish clean-up jobs.

A few attachments were particularly used for the blades themselves. For instance, blade extensions could be used if you require more fork length, which increases lifting capacity. Blade extensions come in lengths varying from 48-120 inches. Rounded or triangular attachments are another kind used whenever moving rolled material so as to make sure it does not roll off of the standard flat blades.

Examples of lifting attachments consist of pivoting and telescoping crane or boom accessories. They could come in several different styles and are normally designed for transferring metal bars, lumber, poles and different kinds of bulky stuff. Other attachments such as different kinds of hooks and hook plates are accessible to lift things with a chain or sling. Slab lifters and magnetic filters are other objects that can be utilized with hook accessories. Slab lifters are specialized attachments that are designed for carrying a variety of materials which are delivered in a sheet or slab format. Carpet poles and rug rams are other lifting tools which attach to your forklift in order to make moving rolls of carpet a lot easier. The attachment hooks onto the lift truck's forks and has a pole that goes through the middle of the carpet roll.

There are several different kinds of forklift accessories which could be utilized for facility maintenance like for example snow blades. These forks attach to front end loaders and can transfer materials such as snow, dirt and soil. Other common cleanup accessories consist of magnetic sweepers and standard sweepers. Standard sweepers includes a broom that the forklift blades connect onto for sweeping big spaces such as parking lots or warehouse and factory floors. The magnetic sweeper is similar except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in areas where there is lots of metal debris like on shop floors for instance. Sweepers have widths up to 60 inches and this surface area makes clean up easy and quick.

Material spreaders are other attachments used on lift trucks. These spreaders are useful for a variety of applications like for instance spreading rock salt, pellets, fertilizers, insecticides, seed and ice melt.

Another optional lifting accessory are work platforms. These could be used by several different companies on a daily basis. Platforms may range in size from 36" x 36" to up to 60" x 60". Several units may be available and are capable of folding up and storing into a smaller place. Work platforms are designed to raise employees up to an overhead location with the use of the forklift. Larger platform models have extra space for personnel to be able to bring tools and other essential items for the task. Normally work platforms are constructed of poly material or steel.
